

**Non-therapeutic
circumcision is the
forced amputation
of the foreskin of a
perfectly healthy
baby boy.**

**Circumcision survives,
generation after
generation, much like
a virus, by perverting
and exploiting aspects
of our human nature.**

**People often think
that if this procedure
was really damaging,
medical professionals
would refuse to do it.**

Sadly, this is not the case. Many medical professionals do see it as damaging, but are unable or unwilling to speak out against it.

**This hospital provides
non-therapeutic
circumcision to
parents that request it.
They have told me this
will not change.**

**I am here today
hoping to raise
awareness, encourage
gentle, compassionate
discussion, and to
improve this situation.**
